Blender Market – Powerprops v0.3.1

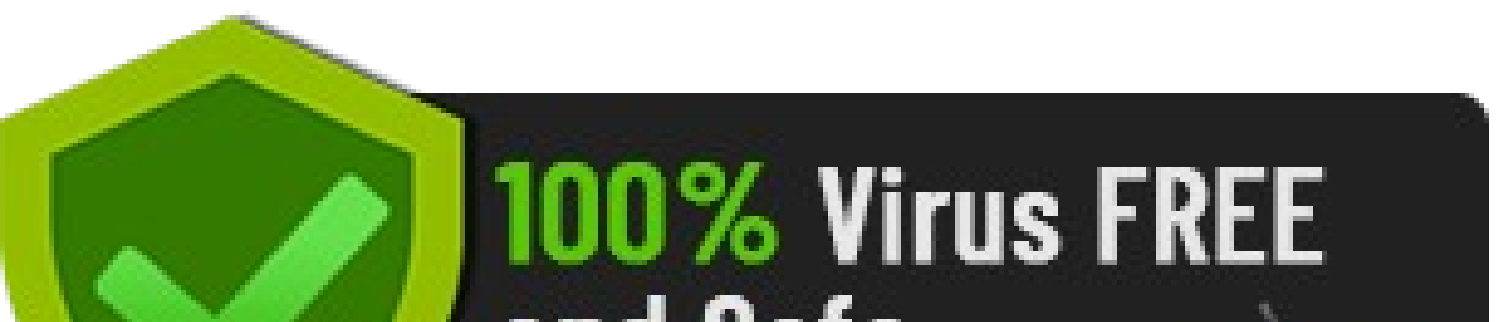

2025-02-10 17:11:29 [label](#) [我要反馈](#) [下载页面](#)

Blender Market – Powerprops v0.3.1: PowerProps is an extension that allows you to create more intelligent, meaningful objects by managing and implementing specific properties and functions. Save all of your essential properties within the object. Batch-add, remove, and copy custom properties, values, and drivers for other objects. You can even select to copy only the values to objects with this property and not ignore other. Select objects quickly by the properties and values that are in line. Create preloaded material objects to manage the properties of materials on an object-by-object basis. Right-click to make a connection drive attributes using specific properties.

Examples:

- All of your valuable properties are together in one location.
- Batch Add Custom property or value. You may even decide only to copy objects with this property.
- Find objects that match the properties as well as values.
- Create preloaded material nodes that determine the properties of a material on a per-object basis.
- Create a connection quickly to control attributes by using customized properties.
