Aescripts Motion Path Pro v1.3:

Motion Path Pro helps to manage animation in After Effects with more ease by allowing the linking of movement paths to masks, providing more control.

It mitigates issues such as keyframe messiness and unwanted motion path adjustments while still maintaining a smooth interface when working on animations with other advanced features.

- **Link Masks to Motion Paths:** Link masks from chosen layers to Motion Paths without any hassle.
- **Slider-Controlled Animation:** Using a slider, motion paths can be animated from 0 to 100 without any hitches.
- **Switch Motion Paths:** All masks can be interchanged at any point without any interruptions.
- **Real-Time Mask Editing:** While the animation progresses, masks can be modified for instantaneous changes.
- **Auto Orient and Reverse:** When using directional controls, Auto Orient can be activated.
- Change the direction of motion paths or set them to a different starting point for more dynamic animation.
- Simple and Efficient UI
- Everything is in one location, which saves time.
- **Comprehensive Mask Path Animation Support:** Supports high-quality animation for design motion images with mask paths as well.
