Design and Craft Memorable Personalities: Let your character designer create attractive and relatable characters that captivate your viewers.

Entering a world full of trolls, dragons, and talking doggies is an everyday experience for animator and storyteller Toniko Pantoja. In the past year, Toniko has spent countless hours crafting appealing characters, directing animated shorts, and working on blockbusters such as How to Train Your Dragon 3, Trolls, and Croods 2. Toniko's technical expertise and distinctive animation style have attracted millions of viewers, helping him build a fan base of more than 335K users on YouTube and Instagram.

In this course, Toniko draws from his professional and personal experiences to help anyone interested in animation create compelling and engaging characters. With Toniko on with you at all times, you'll develop attractive, relatable, and realistic characters that will be used in any personal animation endeavor or pitch for your project.

With Toniko's incisive and direct method of teaching, you'll be taught how to:

- Find useful character references that make you a unique and exciting character
- Explore different versions of your character and see how they will fit into your story
- Create your story in terms of your character's emotions and attitude and character
- Create interesting character dynamics using contrasted personas
- Dove into the real-life character by poses and emotions to tell an authentic story

Additionally, look at some of the characters he has played before and how he used posing and emotions to convey their story.

Whether you're developing a fully complete animation pitch or trying to develop your character in the beginning, this course will assist you in coming up with new characters suitable for any animation or story.

Basic animation and illustration skills will speed up your learning in this course. To learn with Toniko, an internet connection, Adobe Animate, and a graphics tablet are necessary. If you don't own an iPad or a drawing device, you can draw in Adobe Animate using a mouse; for more animation adventures, look at Toniko's complete Animation Learning Path.
