Aescripts Color Shift v1.0.3 (Win):

Color Shift is a tool for transforming video colors by remapping pixel values like hue and intensity to a custom color gradient, creating a new color palette.

It offers 15 Input Range options, such as light intensity and red component, to determine how each pixel is mapped.

The tool supports HDR projects with 32bpc and offers modes for handling HDR values.

Additionally, Color Shift includes an alpha gradient feature, allowing users to create new transparency effects by adjusting the alpha channel independently or in sync with the color gradient.
