The **Mitov Runtime Library** supports all Mitov products by making it easier for developers to develop faster and smarter applications on Delphi, Visual C++ and .NET. It comes with pre-made tools, meaning you won't need to start from the very beginning when building a new website.

It comes with smart containers, features for runtime type information, automatic memory handling, support for threads, OpenCL technology, and tools to develop components. Developers can also benefit from this at design time since components are easier to assemble and run tests on with the IDE.

What makes even stronger is that it can run on multiple platforms. Delphi, C++, and .NET allow for adapting the same code with just a few changes. Regardless of whether you use C#, VB.NET, Delphi, or C++, programming is easy and fast. There will be less studying and recording and more exploratory coding.

### Key Features of Mitov Runtime Library :

1. **Advanced RTTI:** Lets your code understand and react to object types at runtime, enabling dynamic behaviour.
2. **Smart Containers:** Includes tools like linked lists, dictionaries, and array lists that make it easier to manage data structures.
3. **Automatic Class Management:** Handles memory and object cleanup so you can focus on logic, not resource leaks.
4. **Modern Language Elements:** This library offers smart pointers, tuple support, and multi-threaded structures for writing modern, clean code.
5. **Multithreading Support:** Run tasks in parallel to boost performance in real-time or heavy-load applications.
6. **OpenCL Integration:** Use GPU power for fast computing tasks, ideal for graphics or data-heavy operations.

- 7. **Serialisation & Reflection:** Easily save and load object data or inspect your app's structure during runtime.
- 8. **Persistent Collections:** Store mixed data types efficiently and access them quickly when needed.
- 9. **Component Development Framework:** Simplifies building reusable software components for larger applications.
- 10. **Advanced Design-Time API:** Integrates tightly with Delphi IDE to improve UI design and testing workflows.
