Qazi's Toolkit - QT Charts:

The content outlines various tools and charts used in color grading and image analysis to enhance precision in look development and exposure adjustments. It highlights the ability to display all charts in a row or fullscreen mode, control the number of exposure stops shown, and use a color checker and skin tone charts to achieve perfect skin tones.

Key tools include:

- **Exposure Ramp and Mid-Gray:** Evaluate exposure and color placement.
- **Gradient Chart:** Detect grading issues by visualizing color transitions.
- **Gray Ramp:** Visualize the effect of LUTs on brightness.
- **LUT Cube:** Track gamut alterations through a 33-point cube.
- **Skin Hue Indicator:** Ensure accurate skin tone balance.
- **Negatives Indicator:** Identify problematic code values (negatives, NaNs, infinities).
- **Sat False Color & False Color:** Show saturation levels and luminance stops.
- **Highlight Neutrals:** Detect low saturation areas.

The tools also support color space adjustments and transfer function specifications.
