

Polyviews – Easy View Manager For Blender v2.0

2025-02-10 16:52:33 label 我要反馈 下载页面

Polyviews – Easy View Manager For Blender v2.0: Polyviews, a powerful tool designed for users, simplifies rendering multiple views within a .blend file.

Polyviews operates on the principle of Camera + World + Collections = View. Each View encapsulates a selected camera object, a chosen World, and the current state of collections. This setup simplifies managing complex scenes, avoiding errors when switching between numerous cameras and worlds.

The add-on also enables you to save animated scenes with custom cameras and set different start and end frames for each. Switching between saved views is a one-click process, automatically adjusting the Camera, World, collections state, and other settings.

Update 2.0 - 2023/10/25:

- UI Rebuild: Enhanced user interface for better performance and experience.
 - Render Queue Feature: Introduces a render queue for efficient rendering.
 - Saving Render Passes Feature: Allows the saving of render passes alongside your views.
 - Views Grouping & Filtering Feature: Group and filter views for improved organization.
 - Render Output Duplicate Prevention: Avoids duplicates when files already exist.
 - Batch Render Skipping Views Bug Fixed: Resolves issues with skipping views in batch rendering.
 - Default Render Settings in Addon Preferences: Set default render settings for added convenience.
 - Sun Position Addon Integration: Integrates Sun Position settings for each View.
 - Views & Render Passes Subfolder Creation Options: Provides options for creating subfolders for views and render passes.
 - Snap Camera Angle when Creating View from Viewport Angle: Automatically aligns the camera angle when creating a view.
 - Minor UI Improvements: Enhances the user interface for a smoother experience.
-
- Various Enabled Collections for Various Views: Set specific collection states for each View, automating rendering for different scenarios.
 - Use Custom Rendering Settings for Selected Views & Animations: Tailor rendering settings such as resolution, sampling, or look for each View.
