Desktop Installation

1. Open your Lightroom Desktop Version (Subscriptions from Adobe are available for approx. 10 USD per month)
2. Go to your downloaded presets folder and then save the.DNG files on your Computer.
3. Import the.DNG preset files the same way you would import photos to your library.
4. Once imported, go through every Image one by one, repeating the following steps:
 - Open Preset Photo
 - Go to "Develop" in the upper Bar -> New Preset
 - Name your preset accordingly f.e. "Vanilla Cream 1" or "Vanilla Cream 2" -> Under the section Folder select "User Presets" -> Tick all boxes below in the settings section
 - Click "Create"
5. Find your newly created presets in Lightroom's "Develop" Mode on the left sidebar under "Presets / User Presets"
6. To apply a preset, simply click on it.
7. To make your edit perfect and adjust it to your personal taste, play around with the sliders on the right sidebar. Start with "Exposure" and "Highlights" to set Brightness Levels. Every image edit with a preset will need some small adjustments in these two areas as every photo is different.
