Blender Market - Deep Paint Pro:

Deep Paint Addon is an intuitive toolkit for Blender that allows artists to create stylized 3D models and illustrations with ease.

This is made explicitly for Grease Pencil, so it combines modeling and painting seamlessly with features such as 'quick mesh build,' organic modeling, and many customizable brushes and materials. Also, it offers utilities for asset creation, camera rigging, and stylized shading so it serves as a complete package for 3D illustration needs.

- **Grease Pencil to mesh:** Transform Grease pencil lines into meshes, curves, filled, or line meshes for quick modeling.
- **Quick modifier:** For fast organic modeling, modifiers are applied instantly without making downstream history.
- **Stylized hand-painted models:** Achieve a 3D illustration that appears to have been hand-painted using Grease Pencil and Deep Paint tools.

Custom Brushes

- **Grease Pencil Brushes:** Custom brushes can be accessed via a pop-up dialog.
- **Texture Paint Brushes:** Allow the artist more freedom with their painting by including Watercolor, Pastel, and even Airbrush brushes.
- **DPM and Outline:** Easy application of vertex-paint-based stylized shaders.

Material Presets

- These include noise texture with vertex mask (no need for UV), edge-blur, and shadow-only materials.

Easy Data Management in Paint Modes

- Access data and material nodes more easily by right-clicking in vertex, texture, or weight paint modes.

Utility Tools

- **Tree and vine generators:** Add instances of trees, flowers, and vines to your scene while being able to modify them with curves or surfaces.
- **Camera Rig:** Quickly build camera paths.
- **Sky Paint:** Add specially crafted skies to your imagery.

Compatibility

- Recommended for Blender 4.1 but fully compatible with 4.3.
- Designed specifically to work with Eevee.
