**What is 3D programming?**

3D programming refers to the development of software applications that involve the creation, manipulation, and rendering of three-dimensional graphics in a computer-generated environment. This field is diverse and covers various applications, including video games, simulations, virtual reality (VR), augmented reality (AR), computer-aided design (CAD), and more. 3D programming requires a combination of mathematics, computer graphics algorithms, and software development skills to bring three-dimensional objects and scenes to life on a 2D display.
