

CData Drivers for Neo4J v24.0.9060 (21 Oct 2024) All Platforms + License Key

2024-12-18 23:02:15 [label](#) [我要反馈](#) [下载页面](#)

CData Drivers for Neo4J streamline data integration by offering seamless connectivity to Neo4J data from various sources including reporting tools, databases, and custom applications. These standards-based drivers enable users to access live Neo4J data effortlessly, facilitating integration with BI, analytics, reporting, ETL, and custom applications. With unparalleled query performance and comprehensive access to Neo4J data and metadata, these drivers seamlessly integrate with popular analytics tools, ensuring efficient data analysis and visualization.

Moreover, extend ETL tools with Neo4J connectivity, providing robust, reliable, and secure data movement solutions for replication and warehousing requirements. Support for standard protocols like ODBC, JDBC, and ADO.NET, as well as wire-protocol interfaces for SQL Server and MySQL, simplifies connection and management of Neo4J data across various database management applications. Integration with workflow and automation tools further enhances accessibility to Neo4J data, enabling seamless data migration and business process automation.

For developers, the drivers offer a data-centric model that simplifies integration, enabling the creation of high-quality applications at an accelerated pace. Advanced features for data virtualization, such as query federation and predicate pushdown, provide a virtual database abstraction layer on top of Neo4J data, offering enhanced flexibility and performance. Overall, **CData Drivers for Neo4J** empower organizations to leverage Neo4J data across their ecosystem efficiently, facilitating informed decision-making and driving business success.

This package includes the following components:

- Excel Add-In for Neo4J
- Neo4J ADO.NET Provider

标签

- Other Web & Script

- Neo4J Data Cmdlets
- Neo4J FireDAC Components
- Neo4J JDBC Driver
- Neo4J ODBC Driver
- Neo4J Power BI Connector
- Neo4J SSIS Components
- Neo4J Tableau Connector

Key Features of CData Drivers for Neo4J :

1. Seamless connectivity to Neo4J data from various sources including reporting tools, databases, and custom applications
2. Standards-based drivers enabling easy access to live Neo4J data for BI, analytics, reporting, ETL, and custom applications
3. Unparalleled query performance and comprehensive access to Neo4J data and metadata
4. Integration with popular analytics tools for efficient data analysis and visualization
5. Extension of ETL tools with Neo4J connectivity for robust, reliable, and secure data movement solutions
6. Support for standard protocols like ODBC, JDBC, and ADO.NET, simplifying connection and management of Neo4J data
7. Integration with workflow and automation tools, enabling seamless data migration and business process automation
8. The data-centric model simplifies integration for developers, facilitating the creation of high-quality applications.
9. Advanced features for data virtualization including query federation and predicate pushdown
10. Empowerment of organizations to efficiently leverage Neo4J data across their ecosystem for informed decision-making and business success.
