去下载

标签

- 平面设计
- Photoshop
- Lightroom

4. on the PRESETS TAB click Show Lightroom Develop presets

5. drop the unzipped folder: to develop a preset catalog

6. close & restart LIGHTROOM

What is Film Stock?

Film stock, in the context of filmmaking and photography, refers to the physical material used to record images. It's a light-sensitive, flexible material that comes in rolls or sheets and is coated with a photosensitive emulsion. Film stock is a fundamental component in traditional film-based cinematography and photography, although it has become less common with the widespread adoption of digital technology.
