What's this course all about?

There are many digital screens that we use these days. From Billboards to smartphones. This is accompanied by a large demand for typography and motion design. The reason for this is that the motion design is viewed without audio.

This course will help you be taught how to make an animated typeface using After Effects. You can use it to type as the other types of fonts. However, it comes with the advantage of motion. It isn't easy to make it animated, but after you're done you can then apply it repeatedly to produce strong and consistent typographic content. Ideal for personal projects or to promote to customers as part of their motion branding.

What is Animated Typefaces with Animography?

"Animated Typefaces with Animography" likely refers to a collection of animated fonts or typefaces created and offered by Animography. Animography is a platform that specializes in providing animated typefaces, also known as motion fonts, for use in motion graphics, video editing, and other creative projects.

Animated typefaces combine traditional typography with motion design, allowing text to come to life with various animations and effects. These typefaces can be used to add dynamic and visually engaging text elements to videos, animations, presentations, and other multimedia projects.
