

Disk Sorter Pro & Server & Enterprise v17.0.14 for win x64 & x86 + Activator

2025-05-01 13:40:24 [label](#) [我要反馈](#) [下载页面](#)

DiskSorter is a sophisticated file classification solution for categorizing files across local disks, network shares, NAS devices, and enterprise storage systems. It provides deep insight into disk space usage. It allows users to generate reports and execute file management operations based on various criteria such as file type, extension, user name, and creation date. The software supports over 3,000 file types through built-in classification plugins, ensuring flexibility in classification.

Visualization options like pie charts enhance the user experience, facilitating effective analysis and filtering of file classification results. Reports can be saved in standard formats, including HTML, PDF, Excel, text, CSV, XML, and the native . IT administrators benefit from centralized reporting to an SQL database, enabling comprehensive analysis of disk space usage trends across the enterprise.

DiskSorter offers a command-line utility for file classification operations, and its server version is optimized for enterprise use. **DiskSorter** Server, running as a service, supports parallel file classification operations, scheduled tasks, and advanced features tailored for servers and NAS storage devices. The software includes a web-based management interface for convenient control and monitoring. With batch file classification operations, **DiskSorter** enables the execution of pre-configured commands on multiple network servers and NAS devices, generating individual reports for each. **DiskSorter** is a comprehensive tool for efficient file classification and management across diverse storage environments.

Key Features of Disk Sorter:

1. File classification across local disks, network shares, NAS devices, and enterprise storage systems
2. In-depth visibility into disk space usage
3. Generation of reports and file management operations based on various criteria
4. Built-in classification plugins supporting over 3,000 file types
5. Visualization options, including pie charts
6. Reports can be saved in standard formats: HTML, PDF, Excel, text, CSV, XML, and native DiskSorter format
7. Centralized reporting to an SQL database for enterprise-wide analysis
8. Command-line utility for file classification operations
