Components ASP.Net

.Net

Devart dotConnect for SQL Server Professional is also known as SQLDirect.NET, which can enhance the data provider for the server of SQL which is capable of building on the technology of the ADO.NET as well as the SqlClient to present a complete solution for the users and the developers for the process of developing the server of SQL which is based on the application of database. can offer a high performance, which is native connectivity to the server of SQL, as well as several innovative developments technologies as well as tools. **Devart dotConnect for SQL Server Professional** has been able to introduce new approaches and ways for designing the applications, boost the process of productivity, as well as leverage, is the application of the database and implementation.

Devart dotConnect for SQL Server Professional can cover a wide range of SQL servers as well as features and also permits the users and the developers to harness the capabilities of the server of SQL as well as optimize the application of the database. It can stand out as a set of components that has wide support for the server functionality of the SQL. The dotConnect for the SQL Server permits developers to write efficiently as well as flexible applications of the database. The assemblies in this case are implemented with the use of the optimized code and data access algorithm that is advanced in nature. In this case, the components are undergoing a comprehensive performance, which is testing and designed to help the user and the developer write efficiently and the thin product.

The main goal of the **Devart dotConnect for SQL Server Professional** is to permit users on the developers to write collectible applications. It has a very weak sort of design as well as a tool that the user and the developer can use during the process. It can provide convenient designs, editors for the components managers for the type of SQL Server, the components for the cooperation, and many more.

Key Features of **Devart dotConnect for SQL Server Professional** :

1. It can provide direct access to the server of SQL right within the managed code.
2. It can perform high performance for the users and the developers.
3. It is capable of operating in both connected as well as disconnected models.
4. Consists of a robust SqlData table along with the component access solution of the data.
5. It consists of auxiliary components for the streets of SQL as well as bulk transfer of data.
6. It can support the ASP.NET Provider model.
7. It has extra data binding capabilities to offer the users.
8. It consists of a cross form component for the process of the corporation.
9. It can monitor the execution of the query.
10. It is very easy to deploy.
11. It supports the latest version of the server of SQL.
12. It is licensed and provides a royalty-free per developer process, per team as well as per site.
