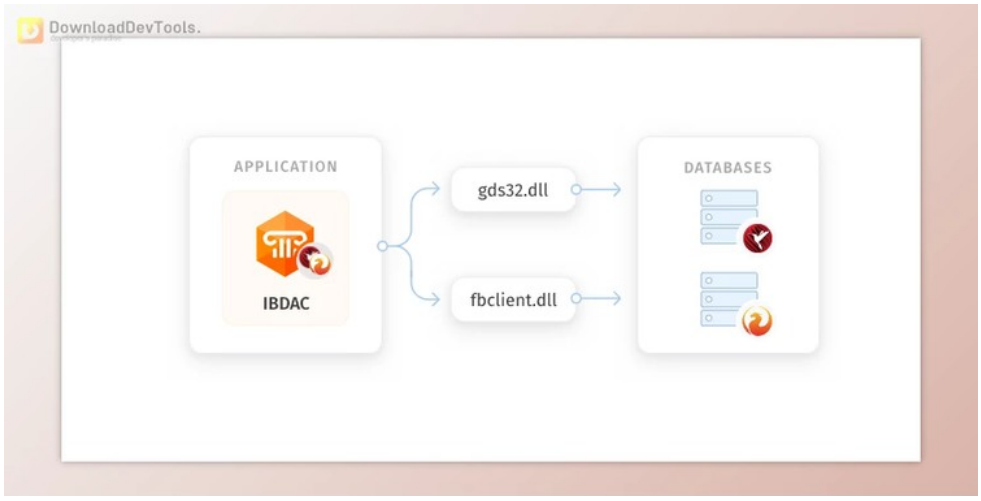
Devart InterBase and Firebird Data Access Components (IBDAC) v10.0.1 for Delphi 6-13 Florence Full Source

2026-03-13 15:00:37



revolutionize database connectivity by offering developers native access to InterBase and Firebird databases from Delphi, C++Builder, and Lazarus environments across multiple platforms. IBDAC eliminates the need for intermediary data provider layers like BDE or ODBC, ensuring direct and efficient communication with the server, resulting in superior performance compared to traditional connectivity solutions. This comprehensive library serves as a complete replacement for standard InterBase connectivity options, empowering programmers to develop faster and cleaner database applications.

Devart InterBase and Firebird Data Access Components (IBDAC)'s cross-platform compatibility enables seamless development across Windows, Linux, macOS, iOS, and Android, supporting both 32-bit and 64-bit architectures. With support for RAD Studio, Delphi, C++Builder, and Lazarus (and Free Pascal), developers have the flexibility to create visually striking desktop and mobile native applications using the FireMonkey platform. The extensive coverage of InterBase and Firebird features, including support for Blobs, Arrays, Unicode character data, and events, ensures that developers can optimize their database applications and leverage the full capabilities of the server.

Furthermore, **Devart InterBase and Firebird Data Access Components (IBDAC)** prioritize performance optimization techniques to provide lightweight, high-performance data access layers. Whether for mobile development, 64-bit platforms, or compatibility with various IDE versions, including Embarcadero RAD Studio 12 Athens and beyond, IBDAC delivers unparalleled connectivity solutions. Additionally, developers can customize data type mappings and utilize advanced functionalities like bulk data loading and server parameter configuration to tailor database applications to their specific needs, making IBDAC the go-to choice for efficient and streamlined database development.

Key Features of **Devart InterBase and Firebird Data Access Components (IBDAC)** :

1. Native connectivity to InterBase and Firebird databases
2. Cross-platform compatibility for Delphi, C++Builder, and Lazarus
3. Direct communication with the server for enhanced performance
4. Elimination of intermediary data provider layers like BDE or ODBC
5. Seamless deployment on Windows, Linux, macOS, iOS, and Android

VCL Delphi Components

6. Support for 32-bit and 64-bit platforms
7. Integration with RAD Studio, Delphi, C++Builder, and Lazarus (and Free Pascal)
8. Utilization of the FireMonkey platform for visually stunning desktop and mobile applications
9. Extensive coverage of InterBase and Firebird features, including Blobs, Arrays, and Unicode character data
10. Optimization techniques for lightweight and high-performance data access layers
11. Customizable data type mappings for flexibility in development
12. Advanced functionalities like bulk data loading and server parameter configuration
