Aescripts Google Earth Studio Toolkit v2.31:

The Google Earth Studio Toolkit by Airweb is an After Effects script designed to enhance Google Earth Studio exports by simplifying the addition of pins, labels, and connection lines.

It offers easy management of these elements with customizable settings for routes, stroke width, and animations, making it ideal for creating professional presentations.

The tool features an intuitive, tabbed interface for streamlined workflows.

The trial version has limitations, such as disabled refresh buttons and multiple selection options.
