#### Workflow

- **First step:** Make sure you keyframe roughly the motion path you wish to follow. Make sure you add an additional keyframe at every point that the layer will bounce and another at each highest point. There is no need to be concerned about timing or the exact route between keyframes.
- **Step 2.** Select the Simple Bounce button. The program will then calculate the necessary parameters for physics to make a realistic bouncing motion on the path you've chosen and modify your animation accordingly.

#### New Changes:

- Tool does not ask anymore on each launch if free or pro should be used
