We know that KIT OPS FREE can make basic inserts; what's different between this and KIT OPS PRO?

This is a query that a lot of you might be asking. There are still significant differences between the two versions. Below is a list of the differences as of KIT OPS: Chuck Norris edition.

Differentialities between PRO and Free:

- PRO includes snapping functions; however, the free version does not. They are instrumental when you use KIT OPS PRO to build objects.
- PRO can create INSERTS that have inbuilt Boolean differences and unions. These can be linked to the targeted object and the insert itself. This lets you create INSERTS created through other parts of the object. The free version cannot do this.
- PRO permits wire objects, which is ideal for placing objects and creating locations.
- If you'd like to use KIT OPS SYNTH and create INSERTS, then you'll require PRO.
- PRO features the most favorite menu system that allows you to shortcuts to KPACKS
- PRO comes with a Factory mode, allowing users to edit INSERTS and make thumbnails using specific settings.
- KIT OPS BATCH only works in conjunction with PRO
- PRO uses KIT OPS PARALLAX to create parallax INSERTS using appropriate thumbnails.
- PRO can quickly create and edit documents.
- Seven significant updates have been made since KIT OPS 2 came out in 2000. Two of which are free updates, and all with PRO enhancements.
- As demonstrated by our numerous and frequent feature enhancements over the last year, we have a lot of grand plans planned for PRO.

Now it has snapped! It's finally here! KIT OPS has advanced level snapping, allowing you to snap your INSERTS to the geometry it applies to.

The latest feature in KIT OPS PRO is the possibility of saving materials by rendering thumbnails. One button will take you into the save mode. You can instantly render a thumbnail and return to your scene in several minutes.

In addition, we now include the new KPACK Set of INSERTS that will create this military-grade communications device. The KPACK is included with the complete device, meaning you can disassemble it at your leisure and receive all the INSERTS needed to build it!
