

ZylSoft ZylCPUUsage v2.15 for D4-D10.3 Rio + CRACK

2025-04-11 20:31:33 [label](#) [我要反馈](#) [下载页面](#)

ZylCPUUsage is a visual Delphi & C++Builder component that displays the chip (s) usage level at a graph.

The demonstration version is fully operational in Delphi and C++Builder IDE. Still, it exhibits a nag dialog (the accredited model will, of course, not have a nag dialog and won't be restricted to the IDE). The package includes demo programs for Delphi and C++Builder and a help file with the description of this part.

ZylCPUUsage is a part designed especially for developers who wish to look at the information on the workload amount of the chip. The application enables developers to construct programs that can display the CPU load in a chart.

The part was designed with support for both Delphi and C++Builder and may be employed with many different iterations of both languages.

The bundle available for download for a trial comprises a set of programs that demonstrate its performance and made in both Delphi and C++Builder.

To utilize ZylCPUUsage, programmers will need to start the .dpk/.bpc document from Delphi/C++Builder, and compile and install it, and add it into the library. Therefore, the element appears at the"Zyl Soft" tab of the component color and can be readily added to several forms. Furthermore, if there are old versions of the app installed and an update is necessary, it's advised to eliminate the old one manually.

In summary, ZylCPUUsage is a wise utility designed for users who wish to look at their CPU status when working and for developers who consider the CPU's electricity and prerequisites.
