

Aescripts Matte Tool 2.1 (WIN, MAC)

2025-02-10 16:58:56 [label](#) [我要反馈](#) [下载页面](#)

20 tools that help to use layers and mattes with layers After Effects. New: Four new tools, a user interface that is responsive, and lots of other improvements and fixes!

Matt's many modes can be complicated. With this tool, which has easy-to-read icons, you will be able to select the perfect mattes with no extra effort.

Matte Tool takes the confusion from creating and combining Matte layers and allows users to create and work on Matt.

Combine, Subtract, Exclude and Intersect mattes using a user-friendly interface.

Subtracting layers from one another

- Merge
- Subtract
- Intersect
- Exclude

Precompose and De-PreCompose With Just One Click.

You can crop your images within the frame at hand or the work area at any time with no limitations.

It will be working with animation objects in the working area.

- Compositions of crops to match their content.
- Cut the layers into sections.
- Groups of selected layers can be cultivated

Separate the layers using drawings masks.

This tool breaks up the object into pieces thanks to the drawings made on it.

There are two ways of separation by masks.

- **Method 1.**

Create closed masks of the object, and through this, we can segregate the masks from the main object.

Separate the layer by drawings masks.

- **Method 2.**

Create a rectangle mask using 4 vertices around it. The other masks can be drawn in a linear fashion and opened by a desired number of vertices.

Separate the layers into components.

The ability to apply it to any composition or layer.

The object must be an object that is transparent.

Convert the layers you have selected into an image file

It converts each of the selected layers into a single image layer. We can select the layers, or the image layer could be

substituted with the selected layers.

Keyer that is powerful, without the difficult configurations.

Take the background out of the video in a totally authentic way.

One-click and the background color is instantly recognized and the appropriate settings are implemented.

On the interface for users, a window displays the original image. you are able to easily select the screen's color by hand. There are additional buttons that allow you to switch between the alpha mode and...

Color transparency is another option alongside this tool that can be used to eliminate any color from objects swiftly.

Transparent your layers linearly

By using this tool, you can transform your layer into a transparent one.

With this tool, Two points are positioned on your object. The transparent layer is based on the two points and the layer selected is made transparent in a linear manner.

The ability to apply to any composition or layer

Uncover any part of a layer

A tool to blend layers to reveal any part of a layer that is hidden by layers that are placed on top of one another.

It lets you design selected regions using just a single layer. Then, you can show the areas in a visual manner. The tool allows you to show any area of the layer below by using the shapes created for a particular layer.

You can also move your blended objects around and create a unique animation of them.
