Unity Asset - ReactUI - A WebGL React-based UI system v1.2:

ReactUI revolutionizes UI design and management with its cutting-edge framework, leveraging React to deliver modern, powerful interfaces. With ReactUI, you can harness familiar web development tools and plugins to craft seamless user experiences for your games.

- **State-of-the-Art Framework**: Utilize React to design and manage user interfaces with sophistication and ease.
- **Comprehensive Tooling**: Includes a pre-set environment featuring webpack for bundling/building, Less for CSS styling, Babel for JavaScript transpilation (ensuring compatibility with older browsers), and React for Virtual DOM rendering.
- **Powerful Event System**: Benefit from a robust and extensible event system, enabling seamless event management and communication between the game and UI. This functionality is facilitated by a specialized JavaScript/C# bridge integrated into the package.
- **WebGL Compatibility**: Specifically tailored for WebGL-based games, ensuring optimal performance and compatibility with web-based gaming platforms.

By leveraging ReactUI, developers can seamlessly integrate advanced UI functionalities into their WebGL games, enhancing user engagement and overall gaming experience.
