# Aescripts Duplicate Frame Remover v3.3 (Win, Mac)

2025-02-10 16:44:02　　label 我要反馈　　下载页面

Aescripts Duplicate Frame Remover v3.3 (Win, Mac): Removes duplicate frames in the footage. Retiming feature is new and 50 more efficient processing.

Utilizing the same engine used by Magnum it scans the footage and eliminates duplicate frames by using the channel's time-remapping feature. This is a great feature for gameplay videos or Roto jobs in which the footage is characterized by funny pulldowns or other situations that require you to eliminate duplicate frames from a video.

New Changes:

- Added new preference to turn off the guidance prompts and auto-delete the ROI layer

- The key framable Region of Interest feature allows you to specify where the detection will take place.
- You can also retime the footage to its length of the original with After Effects' built-in retiming tools (Pixel Motion and Frame Mix)
- 50 percent faster processing
