FILMIC COLOR CONTRAST

In color theory, the term "color contrast" describes the harmony between hues of color. The Kodak 2383 film printing emulation software automatically alters the colors of your video and then arranges them in an appealing color harmony to give your film an attractive and cinematic look.

SUBTRACTIVE SATURATION

Deep colors and rich tones are vital to the cinematic film aesthetic. This Kodak 2383 contrast of colors and the subtraction-based saturation added to the Davinci Resolve Powergrade combine to create a balanced and visually pleasing saturation.

HALATION, GLOW, AND FILM GRAIN

Videos made with film cameras naturally include glow, halation, and grain on film. To produce an image that appears as if it had been shot with film cameras, The 2383 Power grade includes a set with nodes to process your video before it reaches the film print emulator and gives the look of a film camera for your film.

SKIN RETOUCHING MADE EASY.

With the aid of the built-in Photoshop design frequency separation as well as its native Davinci Resolve OFX software, users can create clear skin texture and even skin tones that are of professional quality.

CREATE BETTER LOOKS

The Kodak 2383 power grade produces a unique film look that can be used as the final look for any project. It is also an excellent base to take your color grade even further. You'll notice the naturalness of your film when creating an image grade using the color of the Kodak 2383 print emulator and how it produces better visual results.

What is Nomadic George – Kodak 2383 Cinematic PowerGrade?

It's clear that this film stock played a significant role in the world of cinema due to its unique and iconic characteristics.
