Joel famularo phantom luts for panasonic:

LUT pack for Panasonic S1H, S5, and S5II users, designed to emulate ARRI Alexa's Rec709 color science for V-Log + V-Gamut, addressing dissatisfaction with native Panasonic colors. The LUTs were created after testing with matched exposures across 80 scenes using an Alexa Mini and Panasonic S1H. The pack includes 5 LUTs: Neutral (accurate ARRI Alexa Rec709 emulation), Tungsten (warmer cast for tungsten lighting), Ice Blue (cooler, punchy blues), Jamaica (green and gold tones), and Utopia (filmic look with boosted contrast).

Additionally, a 'Film Look' LUT pack offers 6 LUTs inspired by real film stocks for BMD LOG footage. These LUTs are based on iconic stocks like Kodak Vision and Eastman and include variations like Vision Teal, Eterna (Fuji), and Bleach (bleach bypass), each with distinctive color and saturation profiles to recreate specific cinematic looks.
