Aescripts KEYboard v1.2.7 (WIN, MAC): Control keyframes along with your computer keyboard.

KEYboard stipulates a string of purposes for keyframes in After Effects. Those purposes are small but may be used regularly, like placing keyframe Ease, cloning keys, mirroring keys, altering keys, or randomizing keys. The most essential is how you are able to perform these via keyboard shortcuts.

Using KEYboard, animators may do things faster and wouldn't be disrupted by these repetitive jobs.

New attribute: KEYBOARD window may look in the past shut position

New Changes:

- Updated Licensing Framework
- Fix errors when using easeInOut in v1.2.5
- Fix slow startup speed
