1ST Method Overlays Action

This method is more sophisticated because it allows you to quickly apply overlays of all kinds and also those of other companies. When you define the parameters for this action, you can assign the keystroke to the F3 (for example) to ensure that with just one keystroke the action is initiated.

1. Double-click the "Overlay" Actions.atn this file in order to load the file into Photoshop. After it has been installed, you can open the Actions panel of Photoshop by clicking "Window Actions". There are two actions available: JPEG as well as PNG Overlays. One major main difference between Overlay Action JPEG as well as Overlay Action PNG can be seen in the way that JPEG utilizes screen blend mode.
2. Search for 'Overlays' Action Select 'Overlays Action' and then select play the action you wish to play.
3. It appears that the Photoshop dialog box opens and prompts you to select the photo. Continue to browse until you find the folder you've unzipped. Then, select the image you like. The image will then be transferred to your Photoshop photo file and it will be displayed.
4. Reflect, turn, or scale the overlay if you'd prefer
5. Use into the CMD (Ctrl) then press enter and it creates an overlay layer as well as two layer of adjustments. If necessary, apply a white brush over the layer mask for the layer to be covered, if necessary. Once you are in those layers of adjustment, change the levels or colors to ensure the overlay looks right to the photo.
6. Save the image and display it to your clients. They'll be amazed by the results.

2nd Method The Quickstart Photoshop Course

It allows you to work inside the Photoshop file, then selecting the layer that you wish to overlay and show it. This is beneficial as it allows you to view the thumbnails of layers inside the image. However, it can be a hassle that in some variations of Photoshop the file may not open properly. This feature isn't required and is provided as is.

3RD WAY: DRAG'N'DROP

3.1 Drag from the directory any photo you want to save it in the Photoshop file. If you have images that have backgrounds that are black, make use of Blend Mode on the screen. To change the blend mode, double-click an image, the window with designs will be shown. Choose the blend mode you want to use and proceed to the next step. If overlays have transparent backgrounds, there's no requirement to change any settings. 3.2 Change the scale and transformation, decrease the opacity, or add your Layer Mask and apply paint to the overlay if needed.

A Little More

- Compatible with all software which use layers (Photoshop Photoshop CS5+ Photoshop Elements Paint Shop Pro and the list goes on.)
- Not for distribution
- It is an online download. The download isn't a tangible product that needs to be shipped
