It has the ability to easily create a very high-quality data models for the user and developer. The toad data modeler has the ability to permit the user and developer in order to rapidly deploy a very accurate changes to the structure of the data right across the 20 different platforms that are present. It permits the user and developer in order to construct a very logical and physical model of data and also to compare and synchronize the models and finally quickly generating a very complex SQL along with a DDL, to create as well as modify a schema of the database as well as the script and also to reverse and forward the engineer of the database as well as the data warehouse system easily and flexibility. The toad database modeling tools are capable of simplifying the design, maintenance as well as the process of documentation, right at a price which would be affordable by all the organizations. It is described to be a database design tool which permits the user in order to create as well as maintain and at the same time to commence new or even the database which is already existing and finally deploying to changes the structure of the data across other platforms. It is basically used in order to create a logical as well as a physical data model by the user easily. It was previously called case Studio 2 right before it was acquired by the quest software in the year 2006. The user has the ability to visualize database structures and even understand the relationship of the existing database more clearly with the help of the toad data modeler. The toad data modeler is present in order to help the user and developer to easily deploy the accurate changes to the structure of the data as well as the structures across platforms. Gaining a very easy to use data modeling tool for the design process of the database as well as the modification and the document creation is possible by the toad data modeler easily and flexibility. It permits the user and developer in order to deploy a very accurate changes to the structure of the data.

Toad Data Modeler Great Features:

It does the following features and attributes that are stated as below such as:

- Multiple support for the database is provided and also it provides the ability to connect multiple databases natively and simultaneously by the user and a developer which includes the MySQL, SQL Server, Microsoft Access, SAP, Oracle and a few more to be mentioned.
- It has the ability to provide the simplified data modeling tool to the user and the developer. The user has the ability to create a quality database structure or even make changes in the models that are already existing and also have the capability to provide a documentation to the users and the developers on multiple platforms easily.
- Logical as well as physical modeling process is provided to the user and developer. The creation of the complex logical as well as physical entity relationship model that are capable of reversing as well as forwarding the databases.
- It has the ability to easily integrate as well as generate a detailed report on the structure of the database which is already existing.
- Adding of the logical data to the user diagrams in order to customize the model of it.
- It has the ability to synchronize a unique model with a user existing database with the use of the ALTER generation of the script and also merging the model features.
- It has the ability to simply migrate the structures right across the platforms of the database easily and flexibility for older users and the developers.
- Viewing the relationship as well as the work with the attribute as well as the columns right from the linked entities as well as tables is possible by the user and the developer.
- It provides the process of physically accessing and gaining data by the creation of the folders in order to store them in the models, for the business requirements and needs, and finally the specifications along with other files.
