**Good boy Ninja – Noodle V2.5 (WIN, MAC):** Noodle produces secondary animated sequences responsive to the main motion. If the client wishes to re-watch the main motion, they don't need time to reset each of those secondary keyframes, either.

- **Puppet Pins** - Create Puppet Pins loosely respond to the transformations made by the layer
- **Path Points** - Every single point of a noodled path reacts dynamically to the transforms of its layer
- **Parenting** - Children who have Noodle applied loosely can follow their parents
- **Set Simulation Quality** - Choose from several simulation qualities to increase performance
- **Quick On / Off** - You can temporarily disable the simulation by right-clicking on the quality dropdown if you don't require it.
- **Bake / Unbake** - Increase your performance by committing to the result only when you're prepared!
- **Advanced Editor** - Open the Editor panel to tweak your results when needed.
- **One smile can be used for all** - Select from curated themes designed through the Good Boy Ninja to make your time staring at your computer screen more pleasurable.
- **Noodle Puppet-Pins** - Find out how you can make puppet pins respond to their parent's movements
