#### Blender Market - Combined Render v1.0:

The "Combined Render" addon by KVD simplifies multi-camera rendering in Blender. It offers two main features:

- 4 Scenes Camera:** Users can add cameras to selected scenes, adjust them as needed, and render images for each camera, including a combined image of all four. It allows easy scene switching, customizable render resolution, and includes an Insta-default button for Instagram resolution.
- Object Cameras:** Ideal for product shots, it adds four cameras around a selected object, each facing different directions (front, top, left, right). Users can track other objects and adjust camera settings for each view. The addon renders individual images for each view and a combined image, with a default resolution of 1920x1080, adjustable as needed.

The addon automatically opens the output folder once rendering is complete.
