Aescripts Bendio v1.0.1 (Win, Mac): Bendio It's an After Effects plugin that bends layers that can connect different layers with the bend. It's easy and fast to use and will be used with any layer, including rasters and vectors.

Bendigo is a great way to incorporate twists in chains parented, like character rigs.

You can make it work with puppet pins; however it can take a long time to put them up, and it often appears... awful and is difficult to adjust once you have set the pins.

How to use bending layers and connecting different layers in plugins?

you can use Aescripts Bendio.

Where can I download the product?

After subscription, You can download it for free from here.

With Bendio, you drag the points to your preferred location and then move them as you want to. You can also use a button to create nulls that follow these points when you move the layer.

You'll be bent and up much faster and more consistently, and you can begin creating beautiful animation.

BEND IT BETTER

The effect that is native to CC Bend crops a layer that is so abrasive that it can feel as if the effect is controlling how to bend things.

In essence, Bendigo offers the same basic bend found in CC Bend. It's only different that we've made it so that it is possible to eliminate that cropping and then animate the entire bend completely.

Bendigo renders rigid pixels at the bend's end, and you'll get an undistorted area on both sides. Items like torsos and shoes are likely much easier to make bends using this method.

STAY SHARP

We love the shape and .ai layers and like them to remain transparent (or constantly rasterized). However, the effects you apply to them won't change along with the layer as you play with it.

In Bendio, we devised an approach to allow the effect to function generally without composing the layer or switching off its switch.

Select the Convert To Mask button, and your created points become mask points, and they will stick to the layer no matter what you do to it.

New Changes:

- Corrected an issue with cropping
