**Form Parametric**

Shapes could be Triangle, Rectangle, Circle Star "Y" or "X"
Each parameter in this shape is adjustable and animated using noise or customized layers.

**Grid array**

The grid may be either hexagonal or regular. With the help of scripts, it could be something like a spiral sine or even Phyllotaxis.
Additionally, any of the parameters on the grid is able to be animated with noise, or custom layers.

**Instances**

Each grid point is represented as a copy of the shape. It is referred to as an instance. Instances come with a variety of parameters to be animated such as Angle, Radius, Position Offset Color, and Alpha.
