Create 3D Parallax Video Slideshow Easily in AE: In this course, you'll learn to utilize the incredibly efficient Adobe After Effects to create a 3D Parallax slideshow like the one shown in the promotional film.

This stunning parallax effect will transform your ordinary 2D still photos into an incredible 3D-moving storytelling slideshow. We've seen this effect on the titles and credits of films, where still images are animated to appear to have a 3D appearance. A still image appears on the screen and looks like it is moving through 3D space. The Camera appears to be moving or tracking in the direction of the subject.

I will guide you through the motion graphic procedure, starting with creating the 3D Parallax Photo setup until we get to the final details and then exporting the project to Adobe After Effects.

Through the course Adobe After Effects course, you'll be able to do what follows:

- Make Your 3D Parallax photo setup to be used within Our After Effects Parallax Slideshow
- Create and apply masks, and disperse layers across 3D space with the 3D space of After Effects Parallax Slideshow
- Install a 3D camera and align layers correctly to allow you to move through our 2D images inside the After Effects Parallax Slideshow.
- Alter the values of your masks to create a beautiful-looking parallax using After Effects.
- Add some fantastic effects to increase your parallax. Add more depth and life to it.
- You can add as many slides as you need quickly and effortlessly in only a few steps without repeating the entire process.
- Create an animation between two scenes using the After Effects Parallax Slideshow.
- Include some light leaks to add some light leaks to your slide display and make it look more appealing and rich using After Effects.
- Create a watercolor-based title and place it into your 3D parallax within After Effects.
- Create an effect that is triggered in the opposite direction in two scenes. Finally, save your 3D Parallax Slideshow to After Effects.

Additionally, you will be taught about fascinating effects, such as roughen edges, turbulent displacement linear wipe, cc lens blur, fast blur, evaporate, 3D Camera, and much more. You will also receive the project's file and the essential assets needed to create.

After the course:

- You'll be taught the techniques that you can then expand on and design your slideshows in 3D parallax style with Adobe After Effects
- You can use these capabilities, and I will show you the process I employ to create 3D Parallax slideshows.
- Make your ordinary 2D still pictures into stunning moving 3D slideshows of storytelling
- You will also receive the project file and the resources to use.
