With deep, rich blues and vibrant green foliage AeroLux can be considered one of the most loved presets that I've designed. I created AeroLux LUT AeroLux LUT to closely mimic the appearance of Kodak's iconic but now discontinued Infrared film Aerochrome.

The fact that you're not able to buy the film, doesn't mean that you can't be deprived of this exclusive IR look that makes your photos appear out of the norm. AeroLux is most effective on photos with lush, green leaves and blue, cloudy skies.

### Gfx plugin details of The RunNGun – AEROLUX LUT

The product is in the **LUTS category**, for more information about this post you can click on the home page link in the sidebar. To search for similar products to The RunNGun – AEROLUX LUT,
