Thanks for your interest In buying the Prince Meyson skin tone LUT package for Photoshop. All these are LUTs I have created with the expertise I have assembled as a photographer and Retoucher within the previous 7 decades. These presets are created to operate with moderate to Dark skin tones but may also be used for individuals of any colour.

These beautiful but not on the top presets will Give you the ideal amount of colour grading you require for skin tones.

TIPS

All these LUTs function best when pictures are taken between 5000 and 6000 Kelvin. I've Analyzed these LUTs with pictures taken on both the Canon and Sony Cameras plus they work Great since these cameras have a tendency to get plenty of reddish tones inside.

DISCLAIMER: Please keep in mind that most my pictures Include distinct Tones and lighting to yours, therefore these LUTs will seem different from picture to the image.
