Delphi　　VCL　　Components

revolutionizes data analysis by offering a dynamic, high-speed standalone OLAP-cube engine alongside a rich suite of features. Compatible with Delphi 2010-XE8, RAD Studio 10-11, and Lazarus, this tool empowers developers to integrate Business Intelligence seamlessly into their applications. Users can harness its capabilities to prepare and shape data for analysis effortlessly, allowing them to generate insightful reports and make informed decisions.

The tool's comprehensive feature set includes connecting to data sources, data shaping and processing, interactive data analysis with pivot capabilities, UI customization, and robust data visualization and reporting options. Moreover, it seamlessly integrates with other application components, offering a synergistic approach to smart reporting and Business Intelligence. With **FastCube VCL Professional**, users can bid farewell to cumbersome Excel tables and embrace efficient multi-dimensional data analysis and cross-tab reporting directly within their applications.

This set of components facilitates in-memory data cube implementation and OLAP operations, enabling the creation of pivot table reports easily. Its versatility extends to supporting various data connection methods, instant data handling, and saving data in compact formats for exchange and storage purposes. With features like instant data slice creation, unlimited measures in summary tables, statistical operations, and flexible data display options, **FastCube VCL Professional** empowers developers and end-users alike to delve deep into data analysis effortlessly.

Key Features of **FastCube VCL Professional**:

1. Seamless integration of Business Intelligence into applications

2. Data preparation and shaping for end-user analysis

3. High-speed standalone OLAP-cube engine

4. Interactive data analysis with pivot capabilities

5. UI customization for native integration

6. Data visualization and reporting options

7. Integration with other components of the application

8. In-memory data cube implementation

9. Support for various data connection methods

10. Instant data handling and compact data storage

11. Comprehensive statistical operations

12. Flexible data display options

13. Export to Excel, Word, HTML, and XML formats

14. Printing capabilities with FastReport

15. Graph construction with TeeChart
