**Unity Asset - Better Fog Height Fog Light Scattering More v1.3:** Enhance the visual appeal of your game and elevate its atmosphere with Better Fog, a powerful post-processing effect designed to offer a diverse range of styles, from realistic to stylized, without compromising performance. Unlike volumetric solutions, Better Fog ensures optimal performance while providing various features to customize your game's appearance.

Crafted using Shader Graph for URP and Amplify Shader Editor for Built-in render pipelines, Better Fog seamlessly integrates into your project, offering compatibility with transparent objects without needing shader modifications.

- Screen Space Light Scattering (SSMS): Achieve a more realistic feel for the fog by simulating light scattering effects.
- Gradient Fog Colors: Customize the fog's appearance with your gradients or choose from a selection of presets included with the asset.
- Skybox Fog Integration: Maintain consistent visuals with any skybox in your scene.
- Distance-Based Fog: Apply fog based on radial distance, adding depth to your environment.
- Height Fog: Create atmospheric height fog effects to add depth and realism to your scenes.
- Volume Blending: Use post-processing volumes to blend between different fog seamlessly presets.
- Transparent & Particle Support: Ensure compatibility with particles and transparent objects, enhancing visual coherence.
- World Fog: Customize and add fog using planes and spheres with custom shaders, offering creative flexibility.
- Custom Fog with Particles: Includes procedural fog particle effects for added atmospheric immersion.
- Fog Energy Loss: Simulate photon energy loss due to fog scattering, enhancing realism.
- Simple Integration: Easily incorporate the effect into your project with straightforward integration.
- Versatile Customization: Fine-tune each feature as needed, utilizing keywords for optimized performance.
