### Unreal Engine - MGT Multiplayer Gravity Template 5.3:

Multiplayer Gravity Template (MGT) sets itself apart from other altered gravity systems by eschewing the transformation of players into physical objects. Instead, it seamlessly integrates with the native character movement component, harnessing the benefits of Epic's designed and optimized prediction systems. This unique approach ensures MGT's compatibility with multiplayer setups, leveraging the efficiency of native prediction systems to minimize lag effectively. Notably, MGT surpasses the gravity system utilized in the development of the Galactic Goal game, showcasing its advanced capabilities. With MGT, achieving a functional and user-friendly dynamic gravity system for Unreal Engine in multiplayer scenarios, both for players and physical objects, becomes effortlessly attainable.

Multiplayer Gravity Template (MGT) stands out as the pioneer in gravity systems, offering a range of unprecedented:

- Real multiplayer dynamic gravity for players, enabling diverse scenarios like one player navigating a cylinder while another traverses a cone.
- Real multiplayer dynamic gravity for physical objects, ensuring consistent positioning visible to all players, even when interacting with objects.
- Compatibility with AI bots, allowing seamless integration of dynamic gravity into artificial intelligence functionalities.
- Support for animations, including side steps, diagonal runs, and more, enhancing the visual experience in your projects.
- Option to implement directional gravity for added customization.
- [New] Introducing Ring World Gravity for expanded gravitational environments.
- [New] Starship Gravity (alpha version, single-player only for now) for immersive space-themed experiences.
- Four camera modes, including FPS View and Third Person View, providing diverse perspectives.
