W.A Production Put Me On Drums by K-391 v1.0.3-TCD: Introducing Beats That Bounce - a groundbreaking multi-effect plugin born from a collaborative effort with the renowned Norwegian producer, K-391. This drum processor is designed to elevate your beats by subjecting them to powerful and transformative effects, promising to astonish your listeners. With a focus on punch, weight, depth, and attitude, this plugin acts as your secret weapon for crafting distinct and impactful drums. Its unique split-frequency routing allows for independent processing of low and high-frequency bands, providing unparalleled control over drum shaping and deformation. Whether you're seeking snare refinement or colossal kicks, Put Me On Drums ensures simplicity with potent controls and an array of transformative presets.

K-391, The Producer: K-391, a musical force with over a million online followers and 300 million audio and video streams, has left an indelible mark on the music scene. Emphasizing the goal of creating better music, K-391 expresses the plugin's versatility, affirming its ability to enhance not only drums but also guitars, vocals, or bass - as long as it sounds good.

Low & High-Frequency Split: Put Me On Drums innovates with its unique approach to audio splitting, dividing sound into low and high-frequency modules for independent processing. The adjustable crossover allows you to find the perfect mid-point for your drum processing, with distinct effects applied to each frequency band.

Low Module: Controls for the low-frequency band include Belly, Punch, Sub Tail, Length, and EQ adjustments. Tailor your low end with "Belly," control transient levels with "Punch," and extend tails with "Sub Tail" and "Length." The EQ controls offer precise band focusing or frequency notching for enhanced customization.

High Module: Controls for the high-frequency band include Frequency Shifter, Dimension, Width, and EQ adjustments. Shape upper frequencies with ease, returning high percussion to fit your track's key or adding sparkle with harmonic content. The EQ adjustments and width control provide further customization options.

Compare & Contrast: With two profiles, A & B, easily compare presets or your own tweaks. Copy and paste between profiles for efficient analysis, fine-tuning settings until perfection. The Undo & Redo buttons and Randomize option offer flexibility and unexpected creative outcomes.

Mix & Balance: Independent gain controls for Input and Output, along with a master Mix ratio dial for parallel processing, allow for subtle adjustments or dynamic transformations. The master Limiter toggle ensures smooth dynamics, and the output level slider facilitates accurate A/B comparisons.

Visual Feedback: A live frequency display at the top of the interface provides real-time insight into signal processing. Drag the frequency crossover for a shift between high and low modules, visually monitoring parameter changes with precision.

Further Options: Right-click for additional options, including oversampling, scalable interface zoom, documentation, licensing, support, and more.

Presets: Explore a variety of factory and artist presets tailored to specific percussion and mix characteristics. Use these presets as starting points for your drum processing, covering everything from cleaning hi-hats to enhancing kicks and snares.

W. A. Production, comprised of real-life producers, presents creative plugins like Put Me On Drums to streamline studio-quality processing, making it accessible and efficient for all. Elevate your drum production with Beats That Bounce!

- K-391's Artist Series plugin integration
- Advanced frequency-split drum processing
- Scalable interface with visual feedback for enhanced user experience
- Independent processing modules for high and low frequencies
- Controls for Saturation, Harmonics, and Sub Tail adjustment
