Does this product work on Windows and Mac OS? We mostly include the operating system in the title. if it is not written, it will work on Windows, and you can for the Mac version.

Creating Grids

- Create dynamic grids and slideshows by using various types of layers.
- Many controls can be used to move or alter the grid.
- Moving or deleting items from the grid or altering the grid using other applications is easy.

Precompiling Items

- Create pre-comps that are unique for each selected layer.
- Decide how these should be sized as well as other options.
- Refresh existing comps and pre-comps, and include background layers.

Bulk Editing Comps

- Edit templates or compositions in large quantities. You can add placeholders to compositions quickly.
- Add, remove, replace, or change items' visibility in the comps you selected.
- Target Layers in every composition are based on index or name.

New Changes:

- Introduced "Random" animate options for grid items.
- Manually transform individual grid items with the new "#SG-Transform" preset.
- Added controls to adjust the Z-Position of grid items.
- Added option to bulk edit active composition.
- Set target layers by selection to bulk edit them.
- New grid utilities in the "Additional Utilities" dialog.
- Able to detect and update old grids inside the "Update Expressions" function.
- Automatically update the expression engine if needed with your consent.
- Bug fixes and code structure improvements.
