Blender Market - Projection Modeling v1.1.6:

The Projection Modeling add-on combines the strategies of 2D and 3-D modeling by allowing users to create 3-D fashions using 2D projections.

The add-on hugely improves the ability to detail and create complicated shapes that had been impossible to reap. Users can manipulate three-D shapes in real-time using curves and mesh planes, making it clean to create low and excessive poly models, tricky designs, and distinctive drawings. The versatility of this upload-on ensures that any user can place it to practical use for their initiatives.
