ZylSerialPortAX v1.45 ActiveX Control + CRACK

2025-04-11 20:31:33　　label 我要反馈　　下载页面

ZylSerial Port AX is described to be a thread based asynchronous serial as well as a control of the port ActiveX. With the use of the control of Zyl Serial Port AX the user has the ability to communicate with the external devices easily and flexibly on the port connection of the serial just like modems, the barcode reader as well as the module of GSM and a few more to be mentioned. The user has the ability to use the USB, IrDA, as well as the devices of the Bluetooth because these devices are capable of having a driver that has the ability to redirect the input from the user USB as well as the Bluetooth interfaces into a very virtual interface of the serial. If the user USB device is not supplied with a driver, then the use of the USB controller which has the ability to provide a virtual serial port driver just like the FTDI and even the utilization of the adapter of USB RS/ 232 for the user and developer. The version which is demonstrated is basically full operational but it has the ability to show the dialog. The package basically includes a demo program and also a help file with a description of the controller. It was basically released in the year 2004 and it is not a clone.

ZylSerialPortAX Great Features:

It has the following features and attributes that are stated as below such as:

- It permits the user and developer in order to use it along with the USB as well as the devices of the Bluetooth.
- It is written in C# with the use of the framework of .NET as well as the API calls.
- It has the ability to solve the problems easily.
- It has the ability to provide a demo version which is fully functional.
- The components are capable of easily communicating with the devices externally.
