

Borland Delphi 2005 Enterprise

2024-12-18 23:01:31 label 我要反馈 下载页面

The Borland Delphi is the latest and most recent version of the Borland Delphi and it offers a Rapid Application Development for the Microsoft Windows Operating System of the user and for the Microsoft .NET Framework version of the 1.1 itself. Delphi Borland 2005 has been viewed as having main three distinct characters such as the Win32 role along with the Delphi language and as we already know the Delphi language 2005 is the new successor of the Borland Delphi 7 and the rest two characters are the .NET characters such as the Delphi being a vocabulary which is the great successor of the Delphi 8 and the last but not least is the utilizing C# as a speech. Because of this great feature, the Delphi 2005 is a step for the Borland Delphi 3 and the Borland C++ Builder programmers just for a single agile application of the development of the RAD on the Windows 32 in addition to the .NET Framework provided by it. The Delphi was originally and initially build and developed by Borland as a rapid application and a development tool for Windows just as being the successor of the Turbo Pascal.

Borland Delphi 2005 Great Features:

Some of the great features of the Borland Delphi 2005 are as the following,

- It supports the three unique styles such as the Delphi for the Win32, the Delphi for the .NET, and the C# for all the inside and single developments along with the debugging of the environment.
- It has a smooth migration for the Windows 32 software to the .NET to the inside as well as more precisely the development environment in the same manner.
- It provides support for the Delphi language for the users just with different improvements and developments such as the multi-unit namespaces for many and allows to make loops, functions inline, and the other code optimizations.
- Supports the Win Forms, the ASP.NET Web Forms in addition to the Borland's VCL Frame that belongs to itself for the Windows 32 and has a visual design to build the programs in the manner of the RAD.
- Here, the heterogeneous databases are supported and give access to the users in addition to the database that is multi-tier software and has fresh data Sync, Data Hub, Remote connection along with the remote server.
- The unit testing is being supported here with the DUnit testing and NUnit and with the help of the study of the unit-test frame which is in the Delphi for the Windows 32, the Delphi for the .NET and the C# raise the level of endeavored code.
- Borland Delphi 2005 supports the Enterprise Core object II which is a UML compliant and object Model Framework and object persistence along with the backing of the databases with the help of the Borland Data Provider. Today, this feature is available for ASP.NET.
- It has an easy migration of the Windows 32 applications to none but the .NET right in the same development environment.
- It provides support for refactoring to the restructure of the source code of the user and it is increasingly maintaining and has the chances of being successful reuse.
- Supports the integration of the version and the development of the team along with a special backup and view of the history of the user's project files and the optional integration of the Star Team.
- Borland Delphi2005 supports the integration of the J2EE Enterprise and Java Beans as well as COBRA and serves with the solution of the Janeva for the Delphi .NET and the C# application.
- It is an integrated development environment and can be extended and enhanced in every area.
- With just a single backup, it supports variations and improvement of the group and a historical perspective of the documents of the project along with optional integration of the Star team.
- The Delphi Borland manager provides a display of the directory in the structure of the entire project.
- The Borland Delphi 2005 offers the users a choice of free VCL in free-floating just the same as the case of the Borland Delphi 7 and before that which was opposed to fixing them from the designers of the Borland Delphi.
