- Works with After Effects CC2017 and newer
- No plugins needed
- Frequent updates of new places
- Video Tutorial on how to use
- The music used in the trailer isn't included

Add Music

Go Edit folder, open "Music" composition, and add your music.

File > Import > File and select audio track.

Drop it into the timeline.

Now we need to delete all other layers except imported audio. Select the layer and press Delete.

Now we need to extract our waveform to keyframes. Right-click on the audio and go to Animation - Keyframe Assistant - Convert Audio to Keyframes.

Actually, this is one of the most important steps.

Step 2

Let's go to the end of the audio track and copy timecode. You can use a "SHIFT" key to stick into the end of the layer

Now we need to go to YouTube Composition put copied timecode into the field and press the "N" letter to set out the composition. Also, you can move in and out of the work area with the mouse.

Go to the Composition - Trim Comp to Work Area. Alternatively, right-click on the work area and press Trim Comp to Work Area.

Step 3

We are almost done.

Let's customize the media!

Let's open the media composition and add your media. You can use an image or video as well!

Don't forget to fit the image into the composition size.

Now we can see your imported media into YouTube composition. Also, this image appears in all other scenes.

Add media in the background.

You can drag-n-drop selected clips from a folder into the timeline.

Step 4

Edit Text

The last step is to change texts.

All editable text layers are yellow in color. I (it is relevant to all text layers in this template). To change text, double-click on the text layer and type your text.
