

Embarcadero RAD Studio 10.1 Berlin Architect Update 2

2024-12-18 23:03:30 [label](#) [我要反馈](#) [下载页面](#)

The RAD Studio is a great way to come up with cool apps with the solution of adding new features that are significant and delivers more features to the users and develop updates and releases a longer cycle. The RAD also allows the users to stabilize on a particular single release for a quite long time and permits them to stay on the current platform and then innovates the features. The new two updates of the RAD Berlin include the following features that we will be reading here together. The RAD Studio provides the installation rate and the development across mobile phones, Desktop, database cloud programs for its users. An example of the Cloud program here can be the 64-bit as well as the 32-bit in Windows 10. The RAD has made huge improvements and the Delphi along with C++ Builder with one central aim and goal in mind, to allow their users to help built cross-platform apps and later to deliver these to the larger group of the audience as soon as possible with ease. In this case, the users and the developers are allowed to write procedures that are stored codes in the language of Delphi and embed the business logic and other different data management codes here in the server applications. Accessing the robust data and information has never been so easy and comfortable as it is now.

Embarcadero RAD Studio 10.1 Berlin Great Features

The features that the RAD provides for its users are stated below:

- **The support of the Desktop Bridge:** This feature is responsible for the creation of the. appx packages for the Windows 10 store and also include the deployment of the app support, signing of the integrated code, and also the ability to customize the icons of the app that are stored as well as the other elements of the application here.
- **New VCL Controls:** this feature helps to improve the usability of the application that was improved with nothing but two calendar components for Windows 10 which mimics the controls of the WinRT UI as it provides support for the rest of the other old versions.
- **Quick Edits:** Quick Edits being the feature of the RAD Studio increases the productivity of the developer with its ability to modify the caption, name, alignment, color, layout, and copy of the name of the component. It also enables the image connection or image lists and then binds the control to the data field or the data source for the user.
- **New 10 styles of the Windows:** Its function is to modernize the application look as well as the feel with mainly three Windows 10 styles that account for three styles for the VCL and the Fire monkey in this case.
- **The support of the expanded C++:** This great feature increases the efficiency along with the additional commands options in the line for the Embarcadero's compiler of the Clang-enhancement.
- **Get it installer Enhancement:** The editions can be upgraded and later preserved for configuration settings with the use of the enhanced installer interface.
- **Live prototyping with the connectivity in leading business databases:** The RAD instantly creates programs that are real with real prototypes that have live data just from the database of the business or its sample information and later installs them in Windows, iOS, Android, and also the apps that are native in texture and look across multiple functions right from the desktop factor systems computers, tablets, and phones that are cellular.
- **Leading IoT App development:** It is better for the user to quickly join all the electric gadgets as well as their devices to the program and the business. Rad Studio has empowered its developers to exploit the IoT's energy. Hence, the programmers now can incorporate capabilities that are new to mobile along with desktop applications by the process of incorporating solutions of the clod and the sensor, devices along with the enterprise information, and so on.
- **The design of the preview time using FireUI:** This unique feature of the RAD Studio, enables the users to preview the FireUI app program on Android, OSX, and iOS. The goals have been designed by the user and the changes that have been broadcasted to these devices instantly.
