### INSTRUCTIONS

There are 3 methods of applying overlays to photos: first - by using overlay actions (include) 2nd using the Quickstart PSD course (include only in the PRO version) 3rd, the traditional Drag'n'Drop technique.

#### 1ST Method: OVERLAYS Action

This is a more progressive method as it permits you to rapidly apply overlays of any type, and even with other retailers. When you set the parameters for the operation, you are able to assign your hotkey to F3 (for instance) to make sure that with just one click, you will be able to name this action.

1. Double-click on the overlay Actions .atn file to open it in Photoshop. After installation, you can access the Actions panel inside Photoshop by clicking "Window > Actions". There are two actions available: JPEG and PNG Overlays. The distinction between Overlay Action JPEG and Overlay Action PNG is that JPEG utilizes screen blend mode.
2. Look for 'Overlays Action Select' 'Overlays Action' and then press Play any action you require.
3. The dialog box for Photoshop opens and asks you to choose the image. Continue to browse and locate the folder you extracted and choose the picture you like. The image will instantly be uploaded into the Photoshop folder where the image is opened.
4. Reflect, scale, or rotate the overlay, if you wish.
5. Use the Cmd (Ctrl) and enter, and the process will generate an image layer mask and two layers of adjustment. If needed, use black brushes to the layer mask to obscure the image if needed and, within the adjustment layers, modify the level or color of the layer to make sure the overlay appears suitable for the image.
6. Save the image, and then show it to your customers. They will be amazed by the outcome.

#### 2nd Way The Quickstart PSD Course

This allows you to work with a Photoshop image and then select the layer you want to overlay and make it visible. This is convenient since it is visible on the thumbnails for layers of the image however, it's a hassle to use in certain versions that use Photoshop the file might not be able to open correctly. This is an optional feature and is included as is.
