**HCL AppScan** equips developers, DevOps, and security teams with advanced technologies to swiftly identify application vulnerabilities throughout every phase of the software development lifecycle. Secure your business and safeguard your customers by fortifying your applications using top-tier testing tools, centralized oversight, and versatile deployment options, including on-premises, on-cloud, and cloud-native solutions.

presents a comprehensive range of application security solutions tailored for developers, DevOps, security teams, and CISOs, offering deployment flexibility with options for on-premises, on-cloud, and hybrid environments. Shift Left Encourage developers to produce more secure code from the outset with seamlessly integrated software in IDEs and CI/CD pipelines. It accurately detects vulnerabilities and offers recommendations for prompt resolution.

Continuous Security Achievement Empower DevOps to automate testing throughout the SDLC, leveraging customizable sliders to balance speed and accuracy. Incremental scanning focuses on new code additions, ensuring a continuous security posture. Emphasis on Remediation Benefits from auto-fix capabilities, machine learning to minimize false positives, and auto issue correlation. This approach not only identifies vulnerabilities but prioritizes them for efficient remediation. Exceptional Visibility and Oversight Maintain a real-time security overview with centralized dashboards, consolidated scan results, and customizable lenses for assessing risk posture and compliance.

### Key Features of HCL AppScan:

- Test Web Applications, Web API, and Mobile Backends:** HCL AppScan Standard utilizes cutting-edge algorithms and techniques in its dynamic application security testing tool, ensuring precise crawl coverage and testing. Its unique Action-based technology, coupled with tens of thousands of built-in tests, effectively manages real-world application risks, from simple web apps to single-page applications and JSON-based REST APIs.
- Optimize Testing and Implement Incremental Scanning:** HCL AppScan Standard enables users to fine-tune the balance between test speed and accuracy to align with the specific requirements of their development lifecycle. Leveraging incremental scanning capabilities, users can save time by focusing tests solely on new segments of the application.
- Address the Challenges of Complex Applications:** HCL AppScan adapts its testing approach to cater to diverse

needs. With advanced configuration options, security teams and penetration testers can confidently scan even the most intricate scenarios. The software records and tests complex multi-step sequences, dynamically generating unique data and tracking various headers and tokens. Machine learning capabilities optimize crawling in large applications by predicting links leading to new areas.

4. **Enhance Insight:** Comprehensive reporting within HCL AppScan delivers powerful insights into identified issues, simplifying issue triage and remediation. The software provides extensive lists of compliance and industry-standard reports (such as PCI, HIPAA, OWASP Top 10, SANS 25, etc.) to facilitate compliance with regulatory requirements.
