ArtPreset – Andrey Soladkov – Cinematic Luts Pack: Cine LUT Bundle 2019 from Andrey Soladkov! new 2019 LUT bundle from YouTube writer Andrey Soladkov. Involves a list of 10 LUT documents:

Aqua, ART, CineSand, Domingo, Fire, Keenetica, Lisa, LORD, Papirus, STORM! While those LUTs are made to operate at any footage you take, you are going to find the best results if your clips have been taken in a level profile (such as Cine1, Cine two, or even Cine4 on Sony cameras).

Whilst employing the LUT for your own material, completely lessen the LUT's Opacity / Intensity to 0 percent and slowly begin raising it. You're able to quit raising the Opacity / Intensity if you believe you've got the desired outcome.

If through this process you Discover That a part of your picture appears too dim or too bright, you may earn an easy vulnerability adjustment to fix this. The Same holds for white balance. If your picture looks too cold or warm, adjust the white balance.
