AFT Arrow 10.0.1110 is a powerful fluid dynamic simulation tool designed for the analysis of gas piping and ducting systems. It facilitates accurate calculation of pressure drop and flow distribution while considering factors like heat transfer, real gases, and choked flow.

How to design the analysis of piping and gas channel systems through the tools?

You can design your project from "AFT Arrow".

Where can I download the product?

After subscription, You can download it for free from here.

Key features include precise component simulation, integration with system schematics, efficient design comparison, and operational issue identification. Notable capabilities include advanced marching methods, choking condition assessment, precise component modeling, customizable relief valve behavior, and scenario management.

It offers integrated graphing and reporting tools, cost calculations, fluid and fitting libraries, and compatibility with industry standards. Additionally, optional features like the Chempak™ database expand its capabilities further.
