A Car clean plate Instrument, Which eliminates moving items (Snow, Rain, Crowds,...) from a picture sequence with a camera.

Superpose is a Really powerful and time-saving tool to get rid of non-static objects from a set of images or a picture sequence with a camera. Superpose is best employed as a primary cleaning step for producing clean plates.

The ability of **Superpose** is effective when eliminating a massive number of objects such as rain, snow, or audiences.

Compare to other Methods for snow or rain Removal such as frame-averaging which renders ghosting shadows, Superpose Statistically investigations every pixel and computes the probability of this Background pixel value. This also contributes to a perfect outcome.
